

The hybrid sauna combines traditional steam and the soft heat of infrared

In a hybrid sauna the heat source of the sauna room can be a heater and / or an infrared radiator. The hybrid sauna combines the benefits of two heat sources and you can refresh your sauna experience and enjoy the different features of sauna bathing.

THE HYBRID SAUNA'S OVERWHELMING DIVERSITY

- You can use the heat sources (infrared radiators and traditional heaters) together or separately
- When using infrared radiators separately you will enjoy soft heat, infrared health effects and rapid warming
- You can also enjoy the sauna in the traditional way, using a stove alone, enjoying throwing water on the stones.

When using both heat sources simultaneously in a hybrid sauna, the purpose of the heater is to bring an enjoyable ambient temperature and suitable humidity to enjoy the traditional sauna. The use of the infrared radiator forms a well-directed thermal radiation, e.g. on the back and neck. Infrared thermal radiation takes the warmth deeper and allows you to have a more relaxing and healing experience at the end of a busy day or athletic performance. Sentio by Harvia infrared radiators are safe to use. Despite their low power, they create a powerful feeling of warmth that you will sense instantly.

EASY TO USE

The hybrid sauna equipment is easy to control with a separate control panel. The infrared radiator is connected to a control unit that controls and regulates infrared radiation in a hybrid sauna. There are also hybrid control units that allow one device to control multiple devices, such as a heater and the infrared radiators. If desired, the control can also be implemented on mobile devices, such as a tablet or mobile phone.

A handy solution allows you to enjoy a pleasant daily sauna enjoyment that you no longer want to give up!

TOP-LEVEL DESIGN

- Can be placed in any dry area
- An easy-to-use and modern control unit for sauna heaters
- The black glass touch panel can be installed in a central location
- Control for a maximum of 10.5 kW electric sauna heaters
- Connection for an additional power unit (required for sauna heaters exceeding 10.5 kW)
- Infrared radiator control (3.5 kW or with a max 500 W dimmer)
- Sauna lighting with a dimmer
- Power control for sauna fan

Upgrade your sauna to the hybrid time with an infrared

A sensible installation package for all the saunas, new or old. You can install a radiator in your existing sauna. Control the infrared radiator easily from a separate control panel that can be installed, for example, inside the sauna. You can adjust the intensity of infrared radiation using the slender control panel, which integrates imperceptibly into your sauna. Thanks to the ergonomic backrest you can enjoy the impact of infrared radiation on your back.

The number of users and the installation method determine the content.

TIP

- The control panel can be installed near the location where it is easy to use
- The infrared radiator can be mounted upright or transverse
- The number of infrared radiators can be increased later (or add the additional radiator DIR-350-R-F)

PACKAGE INCLUDES THESE PRODUCTS:

Infrabox
IRB-S

Infrared Radiator
DIR-350-R-F

OPTION:

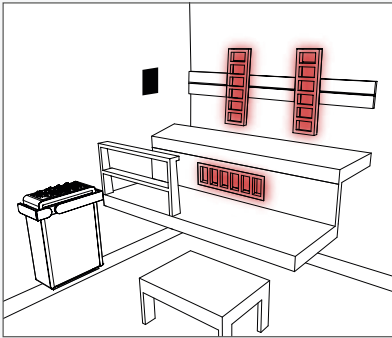

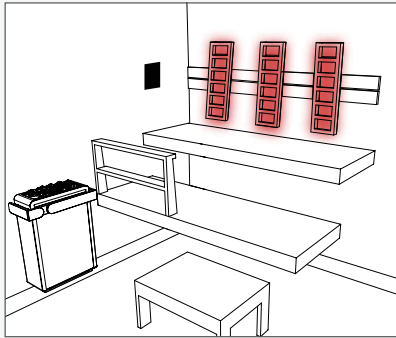

Ergonomic Backrest
514-L (35 x 89 cm, aspen)

Hybrid Package 1

SMALL SAUNA, 2-3 PERSONS

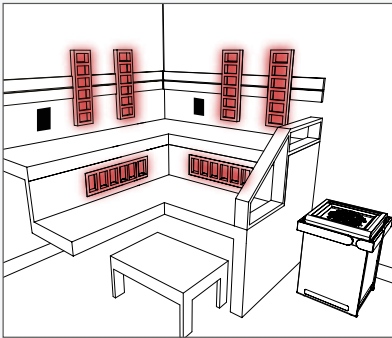

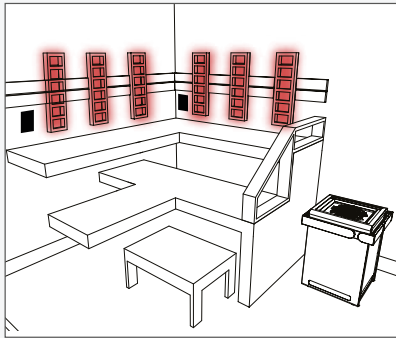

Delivery includes 3 pieces of DIR 350-R-F Infrared Radiators and IRB-S infrared control unit with separate control panel. Control panel can be installed e.g. inside the sauna. Radiators can be mounted upright or transverse. An ergonomic backrest for Sentio by Harvia is recommended and suitable to be installed in front of infrared radiators.

Hybrid Package 2

FAMILY SAUNA, 3-6 PERSONS

Delivery includes 6 pieces of DIR 350-R-F Infrared Radiators and 2 pieces of IRB-S infrared control units with separate control panels. Control panels can be installed e.g. inside the sauna. Radiators can be mounted upright or transverse. An ergonomic backrest for Sentio by Harvia is recommended and suitable to be installed in front of infrared radiators.

Starter package for a new sauna

The perfect starter package for new or renovated saunas to bring the sauna straight into the hybrid time. The heater and infrared radiators are easily used with one modern device. The stylish control panel can be installed for example on the bathroom or living room wall - exactly where you want your hybrid sauna to be safely controlled. The delivery content is determined by the number of users.

TIP

- Install the control panel in an easy-to-use, visible location
- Control the heater, infrared radiators, lighting and ventilation with one device
- You can install the radiators in two different ways, upright or transversely
- Recommended heaters: Concept R Mini, Concept R

PACKAGE INCLUDES THESE PRODUCTS:

Just Sauna
JUST-10D-FI

Infrared Radiator
DIR-350-R-F

OPTION:

Recommended heaters:
Concept R Mini, Concept R

Hybrid Package 3

Supplied with 3 DIR-350-R-F infrared radiators and JUST-105D-FI control unit with a separate control panel. The control panel can be installed e.g. in the bathroom, but not in the sauna. Radiators can be installed upright or transversely. For infrared radiators, it is recommended to build a backrest suitable for the interior of the sauna.

SMALL SAUNA, 2-3 PERSONS
